

cumbere possit: malui itaque Experimentum nullum quam per mortes facere.

Pyrmonti apud fontes Chalybeatos die 12^o Maii 1736. St. N.

Johan. Philippus Seip,

P. S. Barometra & Thermometra in foveam nostram vaporantem immissa, nullas subeunt Mutationes; sed in situ suo tanquam in Aere libero persistunt.

V. *A Letter from John Fuller, Esq; Jun. F. R. S. to Sir Hans Sloane, Bart. Pres. R. S. &c. concerning the Effects of Dampier's Powder, in curing the Bite of a Mad Dog.*

I Imagin'd the Use of the *Lychen cinereus terrestris* with *black Pepper*, had been so infallible a Remedy for the Bite of a *Mad-Dog*, that there needed no Proofs of its Virtue: I myself have used it upon Dogs, and always with Success; and it is strong in my Memory, that some Years ago, a *Mad-Dog* or *Cat* (I forget which) had bit some Children and the Mother, at *Battle*; the Chirurgeon came over to my Brother, Dr. *Rose Fuller*, and we all went out in a Snow, with a Broom, and found some of it, and mix'd it as the Account of *Dampier* directed. They all took it, as well as a Dog or two that were bit, and none of them had any bad Effects from the Bite.

This

This last *Christmas* 1737, my next Neighbour's Servant imprudently going to search whether a Dog suspected to be mad, had been worm'd, (which Dog died mad in three or four Days afterwards) was bit very much in both his Hands: He went to a Person near me, who has had such Success, as to be applied to far and near, and who told me he would venture his Life against a Crown Piece, if a Man, or any Animal, was brought to him within three or four Days after the Bite, that he cured him. I saw the Man that was bit every Morning, and he told me his Doctor went into the Fields, and gather'd an Herb that grew very near the Ground, like a dried Leaf, and mix'd it with *Pepper*. I shewed him some *Lichen cinereus terrestris*, and he said he believed it to be the same. Every Day he took his Medicine, about 10 or 11 of the Clock, he complained of a violent Heat, and Pain in his Head, which I was afraid was the Effect of the Bite, and not the Medicine: But after he had taken it for such a stated Number of Days, he grew better, and has continued well ever since.—He had tied his Fingers with *Shoe-maker's* Ends, which are often used for a Cut; and they were all very much inflamed, and very sore. I made him take them off, and all his Plaisters, and wash his Hands with Salt and Water, and in a Fortnight's Time they were quite well. * * * * If this Account should corroborate any Experiments already made, or incite the Skilful to make farther Search of the Usefulness of the *Lichen*, &c. I hope it will excuse this Trouble from,

S I R,

May 23. 1738.

Your, &c.

J. Fuller, Jun.
